How to Change a bulb in
DUKANE
3LCD
Image Pro
8755J- RJ

First, you will need a screwdriver and a step ladder if the projector is already mounted.
Next, using the screwdriver, remove the three screws that hold the cover in place.

Then, carefully take the new bulb component out of the box. Be careful NOT to touch it with your fingers because the oils from your fingers can explode the bulb once it heats up.
Then, line up the two-prongs with the two-pronged socket on the inside. Just plug the new bulb component into the prongs, and you are
finished.
